Education

Hacettepe University

Computer Engineering

- GPA: 3.21/4.00
- 4th Grade

Çapa Science High School

- GPA: 92.93/100

Ankara

Aug. 2023 – Jun. 2027

İstanbul

Aug. 2019 – Jun. 2023

Experience

VakıfBank

Backend Developer Intern

Ankara

Aug. 2026 – Present

Jotform

Backend Developer Intern

Ankara

Jun. 2026 – Aug. 2026

- Served as the backend developer in a three-person team, building a **PHP-based** Sign Analytics and AI Insights product for analyzing document-signing behavior.
- Designed **REST APIs** and consistent aggregation pipelines for dashboard filters, field analytics, event activity, daily signing and engagement trends, document metadata, and signer sessions.
- Developed a data-driven field-friction scoring model to quantify user interaction challenges and converted raw signing analytics into actionable **AI-powered** insights and document health assessments.
- Added **OpenAPI** documentation, privacy-aware metadata enrichment, and comprehensive contract tests, and presented the end-to-end solution in the internship demo.

TÜBİTAK 1001 ARDEB & Hacettepe DREAM Project

Scholarship Holder | Supervisor: **Prof. Dr. Ayça Kolukısa Tarhan**

Hacettepe University - Ankara

Oct. 2025 – Jun. 2026

- Selected as a TÜBİTAK 1001 (ARDEB) scholarship holder for a research project on domain-specific modeling and open-source software (OSS) quality assessment.
- Owned the project's primary web application work, delivering full-stack features with **React**, **Spring Boot** backend services, **PostgreSQL** database and **Docker** containerization for the infrastructure.
- Built backend services for **DSL-based modeling infrastructure** data persistence, model consistency checks, and integrity control, strengthening quality-model validation workflows.

OdakGIS

Part-time Full Stack Web Developer

Ankara

Apr. 2025 – Oct. 2025

- Developed government-supported **GIS web applications** with **Angular**, **.NET**, **PostgreSQL**, **OpenLayers**, and **GeoServer** across frontend, backend, and map-integration layers.
- Implemented **frontend modules**, **RESTful** backend APIs, and **relational database schemas** to support scalable GIS features and structured geospatial data workflows.
- Improved **data management**, **debugging**, and **user interaction** by shipping production features, resolving defects, and refining application workflows.
- Added **map/image upload and visualization features** using OpenLayers and GeoServer, extending the platform's geospatial data handling capabilities.
- Took end-to-end ownership of full-stack modules, from requirements analysis and implementation through deployment support.

Projects

Internship Workflow Management System

Developed a full-stack internship workflow management platform with **React**, **Spring Boot**, **PostgreSQL**, **Docker**, and **JWT-based** role authorization, supporting PDF report submission, semester management, supervisor token/**OTP verification**, company registration, and end-to-end approval workflows.

[Github](#)

Real Estate Management System

[Github](#)

Built a full-stack property management platform with **Angular**, **ASP.NET Core REST APIs**, **Entity Framework Core**, **PostgreSQL**, and **JWT-based authentication**, covering property CRUD, user management, location-based records, audit logging, and coordinate-supported data.

MPI_Gather on 2D Torus Simulation

[Github](#)

Implemented an **OMNeT++ performance simulation** of MPI_Gather on a 2D Torus topology, comparing naive and topology-aware gather algorithms using completion time, hop transmissions, latency, and root-load metrics.

P2P File Sharing System

[Github](#)

Implemented a **Python peer-to-peer file sharing system** with a central coordination server, concurrent peer nodes, parallel downloads, peer-side download servers, structured logging, and automated test data generation.

HU-LOAD Game

[Github](#)

Created a **JavaFX multiplayer game** using object-oriented design, interactive UI flows, gameplay state management, and event-driven mechanics.

Training

Algorithm Winter & Summer Camp 2025

[inzva](#), İstanbul

One of 50 selected participants from 300+ applicants for an intensive camp by a leading competitive programming community in Turkey. Focused on advanced algorithms (DP, Graphs, Trees) and competitive programming. Solved 50+ problems on Algoleague and competed in an ICPC-style contest, improving speed and efficiency.

TEKNOFEST 2025 – Trendyol E-Ticaret Hackathon

Competed among **302 teams / 1,181 participants**, advanced to the **Final round (Top 20 team)**, and worked with real e-commerce data on **feature engineering**, model training, click-through prediction, and conversion prediction.

Skills & Interests

Technical: C++, Python, ASP.NET & EF Core, Spring Boot, PHP, Angular, React, PostgreSQL, Git Tools, Jira, OpenLayers, GeoServer

Language: English (Advanced – C1), French (Beginner)

Interests: Competitive programming, cooking, traveling
